

SURGE SUPPRESSORS

Contact Us

Barish Pump Company Inc. offers an array of surge suppressors for most AODD pumps. Surge suppressors help smooth product flow and reduce the "hammer" effect that AODD pumps are known for. By reducing this effect, you can greatly increase the life of your pump.

We offer Blacoh surge suppressors in a range of sizes, materials, and capacities to meet your needs. Designed to remove hydraulic shock and vibration, these devices enhance all-around pump performance and reliability in all fluid flow applications.

Available sizes range from 0.38" (10mm) to 3" (80mm) inlet size. Housing materials include stainless steel, aluminum, and polypropylene; elastomer seal materials include Buna-N, PTFE, and polypropylene. Available capacities vary from 10 cubic inches (0.16 cubic liter) to 1155 cubic inches (18.93 cubic liters). Adjustable or automatic air controls. Maximum pressure up to 150 psi (10.3 bar)?varies by model.

If you're not sure which mode surge suppressor is right for your application, feel free to contact us. Our expert team will help you select a surge suppressor that matches your unique requirements.

Order your surge suppressors today, request a quote, or contact Barish Pump Company to learn more.
